RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 36 pages. Original publisher: Reston, Va. : U. S. Geological Survey, 2007. OCLC Number: (OCoLC)164833065 Subject: Nitrogen -- Isotopes -- Analysis. Excerpt: . . . Figure 2. Schematic of a continuous flow isotope-ratio mass spectrometer (CF-IRMS) (modified from Clark and Fritz, 1997). Sample Preparation and Time Requirements Sample preparation involves logging samples into the LIMS-LSI. The logging-in procedure involves logging samples in batches to LIMS-LSI that could contain from 1 to 100 samples per batch (also called a project), printing labels for each sample, and printing a summary project report. Each sample label contains the Field ID (the identifier by which the sample submitter knows each sample) and the unique RSIL Lab ID assigned by the LIMS-LSI. The summary project report is inserted into a three-ring binder titled Samples in Progress. If samples are submitted through the USGS NWQL, the Field ID is a unique number for each sample assigned according to NWQL guidelines; this unique number is written on the analytical services request (ASR) form accompanying a sample, and the ASR information is entered into the LIMS-LSI system. This information is e-mailed to the submitter of the samples for identification of any errors and subsequently e-mailed to the NWQL. Copies of the ASR forms are mailed to the NWQL. Step-by-step procedures are given in Appendix A. A sample work-order sheet is created by LIMS-LSI by printing a Template and a Samples to be Analyzed form; step-by-step procedures are given in Appendix B. The time requirement for sample preparation is about 1 to 5 days. Prepared by: Kinga Rvsz and RSIL SOP: 2900 Karen Casciotti Approved by: T. B. Coplen Page 5 Effective: March 3, 2003 This item...
