Excerpt: .during one of these crises; I found her general condition good. She had lost no weight, but her flesh was soft and her musculature weak, especially about the abdomen; there was eventration at the umbilicus. The stomach has maintained its normal limits, and there was nothing to note in the condition of the liver and intestines, diarrhea being absent. The urinary analysis showed the presence of acetone, marked indicanuria, and phenol in abundance. Further analyses made weekly revealed a progressive diminution in the amount of indican and acetone (this last named substance being found only in acute accidents). The proportion of phenol is still high. The child has been upon the treatment already shown to be indicated in these cases. The crises is over, and the digestion is quite normal. BIBLIOGRAPHY.
