Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from *The Thermo-Dynamic Principles of Engine Design* This book has been written with the object of placing in a concise manner, before engineers and students, the thermodynamic principles underlying the design of various forms of heat engines. With this object in view, no detailed description of the mechanisms of the various types referred to has been attempted except in so far as has been necessary, to explain the theoretical principles involved. To render the book of more use to students, a number of examples have been added as an Appendix. The calculation of heat quantities by means of the temperature-entropy diagram has been purposely avoided throughout, as it has been thought better, for the sake of uniformity, to treat every type from the pressure-volume point of view only. I desire to take this opportunity of acknowledging my indebtedness to Professor S. Dunkerley, now of Manchester University, for much information and kindly help - both formerly when his pupil, and also more recently while his assistant at the Royal Naval College, Greenwich. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
